MF3301/MF3801

First class A4 colour multifunction systems

The A4 colour multifunction systems, d-Color MF3301 and d-Color MF3801, provide print and copy speeds of up to 33 and 38 pages per minute, respectively. They combine top-of-the-range **quality** and **reliability** with full **connectivity**.

These systems represent the ideal solution for offices requiring **sophisticated** tools but where office space is limited.

A **new-generation controller**, polymerised toner and new application platform have been designed to simplify office workflows and deliver high quality prints.

An array of new security functions provide **superior data protection levels** reducing the risk of confidential information loss.

Cost savings and **environmental protection** are strengthened by one of the lowest power consumption levels in the sector, coupled with the use of recycled materials and bio-plastics.

INNOVATIVE MULTI-TOUCH DISPLAY

Day-to-day copying and scanning tasks become easier thanks to the 7" colour **Multi-touch Display Panel**, which is now like using a smartphone or tablet. **You can also customise the operator panel** by adding shortcuts and applications to increase workflow efficiency when preparing copy, print, scan and fax jobs.

MOBILITY

The Mobile Touch Area, with NFC, creates a more flexible work experience for the mobile user, enabling users with Android mobile devices to authenticate themselves, connect and send print and scan jobs simply by holding their device close to the special detection area.

By taking advantage of the most recent technological advances this feature results in time savings and improvements in productivity.

ACCESS SECURITY

The new MFPs provide secure access as a result of a number of different authentication systems such as: password, contactless card and **vein pattern scanning**. The integration of an NFC sensor supports authentication via mobile devices while guaranteeing security of access.

WIDE CONNECTIVITY

With the optional WLAN Kit, the new MFPs can function as a WLAN access point to which mobile

devices can connect in parallel with the company LAN or WLAN network.

This option increases company flexibility and the level of security guaranteed due to protected access.

HIGH EFFICIENCY IN SCANNING AND FAXING

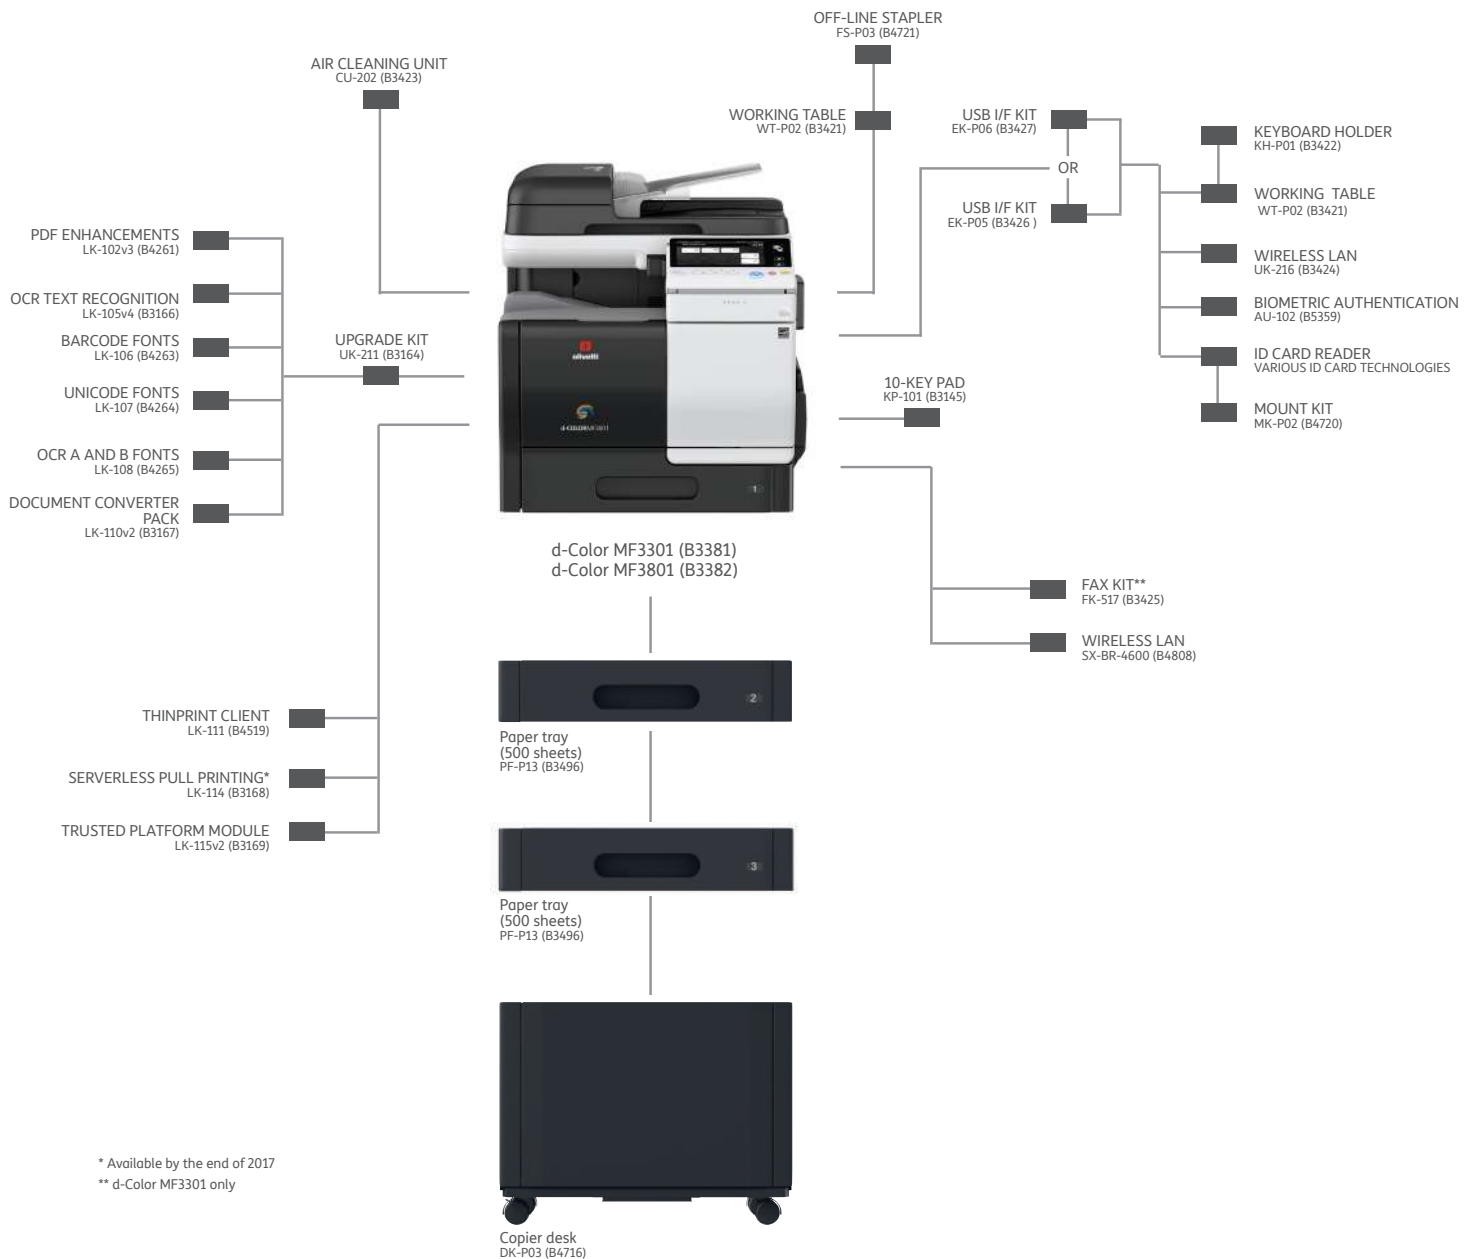

Fast, simple scanning has become an indispensable requirement for daily office activities. After documents have been digitised, they can be transferred directly to an email address, storage system, USB pen or server. Faxes can be sent and received directly via PC. New

security systems protect confidential documents during printing and fax sending.

ENVIRONMENTAL PROTECTION

The use of state-of-the-art technology allows one of the lowest power consumption levels in the sector, producing cost and environmental impact savings. Three functions can be set on the Operator Panel to increase savings in energy and paper. The internal design and **new filter** reduce emissions of fine particles significantly.
