P-3521 MFP / P-3527w MFP

Is a great allrounder.

Do you need a multifunctional system with minimum space requirements? And, do you need a system that makes no demands but still actively supports you in carrying out your tasks by printing, copying and scanning productively and in the best quality? If so, the P-3521 MFP A4 black and white system is exactly what you need! Or, could you do with a little more, standard fax functions and a Wi-Fi interface? And, what about a colour touch panel? In which case, the P-3527w MFP is the better choice! No matter which system you opt for: You will definitely benefit!

What you can expect:

Understandable: A clearly laid out LCD control panel is available on the P-3521 MFP to help you input your jobs. Here, you can save complex, recurring jobs as programs and call them at any time with a simple press of a button. The P-3527w MFP is even more intuitive. It features a colour touch screen that can be individually adapted to the needs and tasks of the respective user. Complex functionality made easy!

Versatile: There are no limits set to productivity at the workplace as both systems can scan up to 40 black and white and 23 colour pages per minute. The systems print at a speed of up to 35 A4 pages per minute and offer the highest quality with a resolution of up to 1,200 x 1,200 dpi. To round off the picture, the systems feature many practical functions such as the automatic Skip blank pages function that filters out blank pages or the ID card copy function that duplicates double-sided, small-format templates on the front side of a single page.

Variable: Mobility is becoming increasingly important in the office. That's why you can also access both MFPs from your mobile end devices via the free Mobile Print app. In addition, the systems also naturally support the Apple AirPrint protocol as well as Google Cloud Print. And, for those who are completely independent, the P-3527w MFP also offers a Wi-Fi interface in addition to an Ethernet port.

Reliable: Good protective measures are needed when working with confidential data. When the 'Private printing' function is used, jobs with confidential content are only triggered on the system once a PIN has been entered. In addition, each user can be assigned their own account via the Management codes function. This creates transparency! However, authentication via a card reader and chip card* is even more practical as then you no longer need to remember your password.
